

Coronavirus Incubation Timeline

It can take up to 14 days to develop symptoms after coming into close contact with a case of covid19 - this is called the incubation period.

Day 0

Jane was a close contact of someone with coronavirus

Day 5

Jane got tested and was negative.

Day 7

Thinking she didn't have coronavirus, Jane attended school and was in close contact with 17 people.

Day 9

Jane developed symptoms and tested positive. She was contagious for 48 hours before her symptoms started (known as asymptomatic) and exposed 17 people to coronavirus. These 17 people now all need to self-isolate for 14 days.

This is why it's so important to complete your full isolation period.
